Abstract

The Scalable E-Commerce Furniture Marketplace Management System is a web-based platform designed to provide a secure, scalable, and user-friendly environment for buying and managing furniture products online. The system enables customers to browse furniture, search and filter products, view product details, manage their shopping cart, and place orders through an intuitive interface. It also provides administrative features for managing products, categories, users, inventory, and orders.

The application is developed using Java and Spring Boot for the backend, React.js and Tailwind CSS for the frontend, and MySQL for data storage. Spring Security and JWT (JSON Web Token) are used to implement secure authentication and role-based authorization. The system follows a REST API-based architecture to ensure efficient communication between the frontend and backend. Docker is used for containerization, while Git is used for version control and project management.

The proposed system focuses on scalability, security, maintainability, and efficient data management, providing a strong foundation for a modern furniture marketplace that can support growing numbers of users, products, and transactions.
